## Summary

---

Fullstack developer completing Gamuda AI Academy (Yayasan Gamuda x Google Cloud), where I led codebase architecture and Git workflows for an AI-powered capstone team. Previously replaced legacy SAP UI5 customs-clearance workflows with a production Flutter Web platform at Malaysia's largest automotive manufacturer, and independently shipped consumer products end-to-end - including an esports tournament platform and a clinic booking system - using Next.js, FastAPI, and Google Cloud. Looking to join a product team where I can own features end-to-end, from architecture decisions to deployment and user impact. Currently deepening LLM-systems engineering - building AI agents (evaluation, retrieval, tool use) and Go/backend fundamentals - with Claude Code integrated into my daily development workflow.

## Skills

---

**Languages:** TypeScript, JavaScript, Python, Dart, PHP, SQL, Go (learning)

**Frontend:** React, Next.js (App Router), Vite, Flutter Web, Tailwind CSS, shadcn/ui, React Three Fiber / Three.js

**Backend:** FastAPI, Laravel, CodeIgniter, SQLAlchemy, Gin, GORM

**Databases:** PostgreSQL, MySQL, Firebase, Supabase

**Cloud & DevOps:** Google Cloud Run, BigQuery, Cloud SQL, Logging & Monitoring, Docker, Vercel, Cloudflare (Pages, R2, Workers), GitHub (Version Control, Actions), Alembic

**AI / ML:** Gemini API, Vertex AI, LangChain, LangGraph, LangSmith, RAG, Agentic AI, LLM evaluation & eval harnesses, hybrid retrieval + reranking, agent / tool-use loops, LoRA / SFT fine-tuning, LiteLLM

**Auth & Security:** JWT, OAuth2, bcrypt, CORS, JWKS

**Enterprise / low-code:** SAP BTP Cloud Foundry, SAP Build, OpenText Exstream

**Agent tooling:** Claude Code, OpenCode, Codex CLI

## Work Experience

---

**Associate Consultant - Software Developer** | E-Outsource Asia Sdn Bhd (VISEO Asia), Kota Damansara  
Jan 2025 - Mar 2026

- Engineered a production-grade Flutter Web platform replacing legacy SAP UI5 workflows for customs clearance operations at Malaysia's largest automotive manufacturer (eMobility / eWorkSpace; Flutter BLoC).
- Eliminated manual Excel-based master data handling by designing RESTful backend APIs and normalised database architecture using Laravel and MySQL (Laravel Homestead), cutting data-entry effort by an estimated 60%.
- Delivered directly into a live enterprise environment with alignment across technical teams and business stakeholders.

**Programmer (Protege)** | Zanko Sdn Bhd, Bandar Sri Permaisuri, KL

Oct 2024 - Dec 2024

- Contributed to a Blockchain-as-a-Service (BaaS) platform using PHP CodeIgniter (MVC architecture).
- Implemented email notifications on project changes and a platform monitoring page; coordinated multi-developer version control with SmartSVN.

**Emerging Tech Intern (Programmer)** | Delaware Consulting Malaysia, Bangsar South, KL Feb 2024 - Aug 2024

- Built and deployed 5+ cloud-native MVP applications on SAP BTP Cloud Foundry (SAP Build) within

an agile consulting environment.

- Designed automated document-generation pipelines for Tokio Marine Life Insurance using OpenText Exstream (XML to dynamic PDF workflow), end-to-end from client requirements through deployment.

## Projects

---

**Baymax - AI GCP Deployment Assistant** | React 19, FastAPI, LangChain, Gemini API, Supabase, Chrome Extension (MV3), Docker, Cloud Run 2026 - Present

AI-powered Chrome Extension that guides developers through GCP deployments by highlighting the exact Console button to click. **1st place**, Gamuda AI Academy Capstone Demo Day (Team Penta V, Cohort 6). Capstone monorepo: extension, FastAPI backend, and marketing site. Source: [github.com/yapsancode/baymax](https://github.com/yapsancode/baymax).

- Built Chrome Extension (Manifest V3, Vite + React 19) with side panel and content-script overlay injected into the live GCP Console; steps are intents (role/name/text), not hard-coded selectors, so the overlay matches the best live element across frames.
- Designed backend on FastAPI + LangChain + Gemini with curated guides preferred over AI-generated plans; chat streams over SSE and can use page-aware context (summary/screenshot) for Console questions.
- Shipped monorepo with independent deploy units: extension, Dockerized backend on Google Cloud Run, Supabase (PostgreSQL) + JWKS JWT auth, and a standalone marketing site.
- Added voice guide (Gemini TTS), click-through guide recorder, and self-heal repair when a Console element cannot be resolved.
- Co-developed a Duolingo-style education web app with structured modules for Cloud Run, Cloud SQL, and IAM onboarding.

**Job Kit / KerjaKit** | Next.js 16, React 19, Supabase, Tailwind v4, Typst, Cloud Run, DeepSeek, PostHog 2026 - Present

Resume tailor product in two forms: open-source CLI kit (**31 GitHub stars**) and live web app **KerjaKit** ([kerjakit.com](https://kerjakit.com)) with **10 registered users**. Paste a job posting, get an honest match report and an ATS-safe one-page PDF - every gap shown, every change explained. Never invents experience.

- Designed a 5-skill CLI workflow (log, analyze, tailor, review, prep) portable across Claude Code, Codex CLI, and OpenCode, with an ATS-safe LaTeX template.
- Built and shipped KerjaKit end-to-end: Next.js 16 App Router + React 19 + Supabase (auth, RLS) + Tailwind v4, deployed as a single container on Google Cloud Run (asia-southeast1).
- Implemented paste → match report → generate → result wizard with honesty enforced server-side (DeepSeek V4 Pro); PDF via Typst + poppler; EN/BM i18n; PostHog analytics; Kertas design system.
- Open-sourced the free CLI ([github.com/yapsancode/job-kit](https://github.com/yapsancode/job-kit)); kept the paid web product private (open-core). Validated demand via community poll (60 votes, 62% web interest).

**Esportorium** | Next.js, FastAPI, PostgreSQL, Docker, Google Cloud Run, Cloudflare R2, Vercel, Alembic 2026 - Present

MLBB esports tournament discovery platform - centralising scattered tournament info across Malaysia into one curated listing. Live: [esportorium.com](https://esportorium.com).

- Built full-stack platform: Next.js 16 App Router (TypeScript) frontend + FastAPI + PostgreSQL backend with admin approval workflow for organiser-submitted tournaments.
- Containerized backend with Docker, deployed to Google Cloud Run (asia-southeast1); frontend on Vercel with SSR and ISR caching; Cloudflare R2 for image storage; schema changes via Alembic.

- Added organiser multi-tenant accounts with JWT tenant isolation (ownership mismatch returns 404, not 403); isolation proved in CI pytest suite.
- Built agentic poster-to-tournament ingest (Gemini vision) into the admin approval queue with an eval gate in CI; nothing auto-publishes.
- Implemented structured data markup (JSON-LD schemas: Event, FAQPage, HowTo, Organization) targeting AI search visibility in Google AI Overviews, Perplexity, and ChatGPT.
- Secured public submission form with Cloudflare Turnstile; admin panel protected by JWT auth and bcrypt password hashing.
- Reduced deployment risk by automating backend validation and deployment through GitHub Actions, enforcing linting, test execution, and successful build checks before Cloud Run releases.

**Personal Portfolio (isyraf-affi.com)** | Next.js 16, React 19, React Three Fiber, Three.js, Tailwind v4, Vercel 2026 - Present

Recruiter-facing personal site with a procedural low-poly 3D hero character. Live: isyraf-affi.com.

- Built Next.js 16 App Router portfolio with React Three Fiber / Three.js interactive hero (cursor-follow, idle behaviours) and SVG fallback for mobile, reduced-motion, and no-WebGL.
- Tuned performance (lazy 3D load, DPR cap, pause render offscreen) and SEO (JSON-LD Person schema, Open Graph, sitemap).

**The Sifu Path** | Vite, React, TypeScript, Tailwind v4, Supabase, Cloudflare Workers 2026

Personal shareable course web app: junior CRUD dev to AI-era engineer path. Five levels, fourteen modules (teach → do → quiz → challenge). Live: the-sifu-path.isyraf-dev.workers.dev. Source: github.com/yapsancode/the-sifu-path.

- Built Vite + React + TypeScript app with local progress (XP, streaks, badges, ranks) in localStorage plus export/import backup.
- Optional Supabase leaderboard (anonymous auth, RLS, realtime) for friends competition; app runs fully offline without Supabase configured.

**Claude Code x OpenCode Go Bridge** | Python, FastAPI, LiteLLM 2026

Lightweight API bridge so Claude Code can run open models via OpenCode Go (\$10/month) without PostgreSQL or Docker. **2 GitHub stars**. Source: github.com/yapsancode/claudecode-X-opencode.

- Built a FastAPI proxy that translates Anthropic `/v1/messages` requests to OpenAI format (system prompts, tools, tool choice, multi-turn) and converts responses back, including SSE streaming and `tool_use` blocks.
- Routed calls through LiteLLM to OpenCode Go models (GLM, DeepSeek, Kimi, MiniMax, Grok) with shell aliases for day-to-day use.

**Medical Clinic Appointment Booking Platform (Klinik Mekar)** | Next.js, Vercel 2025

Production booking system for Klinik Mekar (klinikmekar.com) serving real clinic patients. Led frontend; teammate owned Spring Boot backend.

- Designed and shipped appointment booking UX, admin interface, and user flow for appointment management; deployed frontend to Vercel with custom domain.
- Integrated Google Maps and Google Reviews APIs; SEO via metadata, robots.txt, and Google Search Console to improve discoverability and patient conversion.

## **Speed Trap Monitoring System - Final Year Project** | ESP32, Arduino, Flutter, Firebase, Google Sheets 2024

IoT-based speed monitoring system bridging embedded hardware with a real-time mobile dashboard.

- Built an end-to-end IoT system using an ESP32 microcontroller and IR sensor to detect and record vehicle speed, streaming live readings to a Flutter mobile dashboard via Firebase with 1s latency.
- Handled full hardware-software integration from sensor calibration to mobile app (GetX state management), with historical data visualised in Google Sheets.

## **AI Poster - MLBB Grassroots Poster Intelligence** | LLM art-direction pipeline, image models 2026 - Present (in progress)

Design-intelligence system for Malaysian grassroots MLBB tournament posters (structured art-direction brief → image model). Not yet production-ready.

## **Education**

---

### **Gamuda AI Academy** | Yayasan Gamuda x Google Cloud, Kuala Lumpur May 2026 - Jul 2026

Fullstack AI Developer track. Led codebase architecture and Git workflows for a 6-person AI-powered capstone team (Team Penta V). Capstone **Baymax** won **1st place** at Capstone Demo Day (Cohort 6, KL Campus).

- Established the codebase foundation for a 6-person capstone team - monorepo structure, tooling, and development standards adopted team-wide, enabling parallel feature development without integration breakage.
- Owned Git version control for the team: managed branching strategy, resolved merge conflicts, and coached 5 teammates on push/pull workflows and PR best practices.

### **Bachelor of Computer Science (Software Engineering)** | Management & Science University (MSU) 2021 - 2024

CGPA 3.45 / 4.00. Dean's List, September 2022.

### **Foundation in Information Technology** | Management & Science University (MSU) 2020 - 2021

CGPA 3.11 / 4.00.
