Muhammad Isyraf Afifi Bin Ismail

Shah Alam, Selangor | muhammadisyrafafifi@gmail.com
linkedin.com/in/muhammad-isyraf-afifi | github.com/yapsancode | isyraf-afifi.com

Summary

Software engineer building AI-native products and full-stack systems, from code to cloud to production. Led codebase architecture for the 1st-place AI capstone team at Gamuda AI Academy (Yayasan Gamuda x Google Cloud); helped build a production logistics system for a major carmaker; independently built and run KerjaKit, a live AI resume-tailoring SaaS with FPX payments and 90 registered users, and MCP servers that connect Claude to real business and market data.

Skills

Languages: TypeScript, JavaScript, Python, Dart, PHP, SQL
Frontend: React, Next.js (App Router), Vite, Astro, Flutter Web, Tailwind CSS, Three.js, GSAP, PWAs, Chrome Extensions (Manifest V3)
Backend: FastAPI, Node.js, Laravel, SQLAlchemy, Drizzle ORM, Pydantic
Databases: PostgreSQL, MySQL, MongoDB, Supabase, Cloudflare D1, SQLite, Upstash Redis
Cloud & DevOps: Google Cloud Run, Docker, Vercel, Cloudflare (Workers, Pages, R2, D1, Access), GitHub Actions, Terraform, Alembic, OpenTelemetry
AI / ML: LangChain, LangGraph, RAG, vector search (MongoDB Atlas, Supabase pgvector), LLM evaluation & eval harnesses (including CI eval gates), agent / tool-use loops, MCP server development, model fallback routing, DeepSeek, Gemini API, Vertex AI, OpenRouter, LiteLLM
Testing & Auth: Vitest, pytest, ruff, JWT, JWKS, OAuth2, Cloudflare Access, bcrypt
Agent tooling: Claude Code (including custom skills), OpenCode, Codex CLI
Currently learning: DevOps (self-study), working toward the Google Cloud Associate Cloud Engineer exam
Spoken: Bahasa Melayu (native), English (professional)

Work Experience

Co-Founder | IIDev Studio (SSM registered Aug 2026) Aug 2026 - Present

Web design, SEO, automation and agentic AI studio for Malaysian service businesses. I do most of the work: product, development, marketing and operations, including the studio website (iidevstudio.com: Next.js 16, React 19, Tailwind v4, moved from Vercel to Cloudflare Workers in Oct 2026). The studio also runs KerjaKit (see Projects).

- Delivered and maintain a live website for a paying client, Klinik Mekar 24 Jam (klinikmekar.com, Next.js; live since Oct 2025): online booking, video testimonials, Google Reviews, a blog, WhatsApp contact with click tracking (Google Tag Manager), a Telegram feedback bot, and SEO work (sitemap, structured data, page titles).
- Built and deployed the studio's internal sales system as a PWA: enquiries and prospects in Cloudflare D1, a founder area behind Cloudflare Access with the signed token checked by the app, Telegram alerts, reply-rate tracking, and a rule check on every outreach draft. Covered by about 178 Vitest tests in 20 files.
- Built and deployed a Claude connector for it: an MCP server on Cloudflare Workers with OAuth sign-in and 12 tools, so Claude can read enquiries, audit prospects and save outreach drafts, plus three Claude Code skills for daily sales work. A human still sends every message.

Associate Consultant - Software Developer | E-Outsource Asia (VISEO Asia) Jan 2025 - Mar 2026

- Part of the team that built a logistics system for a major carmaker (client name confidential): replaced legacy SAP UI5 customs-clearance workflows with a production Flutter Web platform (BLoC state management), delivered directly into the client's live environment.
- Designed the RESTful backend APIs and normalised MySQL database architecture (Laravel) that powered the platform's master-data layer, eliminating manual Excel-based master data handling and cutting data-entry effort by an estimated 60%.
- Owned the full delivery cycle from technical design through production deployment within the client's SAP-integrated infrastructure.

Projects

KerjaKit - AI Resume Tailor | Next.js 16, Supabase, DeepSeek, Cloud Run Jul 2026 - Present

AI resume-tailoring SaaS in two forms: an open-source CLI kit (**36 GitHub stars, 6 forks**) and the live web product kerjakit.com with **90 registered users** and live FPX payments. Paste a job posting, get an honest match report and an

ATS-safe one-page PDF.

- Built and shipped the full SaaS end to end: Next.js 16 App Router, React 19, Supabase (auth, RLS) and Tailwind v4, deployed as a single Docker container on Google Cloud Run, with a separate staging environment built with Terraform. Honesty is enforced server-side; PDFs are rendered with Typst.
- Shipped Job Radar: daily job matches from five sources, scored by DeepSeek with a second read of borderline jobs. A fixed-recipe first pass cut the jobs that changed between two scans of the same list from 23 to 6 (out of 180), at about half the cost.
- Integrated CHIP FPX payments: credit ledger, hosted checkout, webhook verification, idempotent top-ups and rate limiting.
- Ran a model evaluation on 30 Fit Checks and moved the English Fit Check to Gemini 3.5 Flash-Lite: about 2x faster, with the same verdict as the old model 83 to 91 times in 100. Added OpenRouter fallback after a 6+ hour DeepSeek outage.
- Retired the in-app chat after usage data showed 44 lifetime messages, dropping its LangGraph dependency.

Hidden Risk Checker - MCP Server for Traders | Python 3.11, MCP SDK, pytest Oct 2026

Read-only MCP server for Claude Desktop that shows retail CFD and forex traders when their open trades are secretly the same bet: it groups trades whose daily moves are 0.5 or more correlated over about 90 days, adjusted for long and short positions, and explains each group in plain words. Built in two days, with an offline fallback and 20 pytest tests.

Tokyo Paradise Mirror Bot - WhatsApp to Telegram | TypeScript, Baileys, grammY Sep 2026 - Present

Listen-only bot that re-posts a team's WhatsApp Community posts into the matching topics of a Telegram supergroup of about 1,800 members, through a persistent SQLite queue; unrouted chats are dropped before anything is stored. 221 Vitest unit tests. In testing, not yet live.

Digital Wedding Invitation | Astro, Three.js, GSAP, Upstash Redis Sep 2026 - Oct 2026

Custom invitation built under IIDev Studio (hanaafzan.iidevstudio.com): a 3D envelope-opening intro loaded only when needed, with a plain HTML fallback, plus guest wishes and a photo gallery.

EzBiz Buddy - AI Guide for SSM Business Registration | FastAPI, LangChain Aug 2026

Chrome Extension prototype, built in three days, that answered questions from official SSM documents (RAG over 1,036 chunks, Gemini embeddings, MongoDB Atlas Vector Search) and highlighted the right field on the live ezbiz portal.

Baymax - AI GCP Deployment Assistant | React 19, FastAPI, Gemini May 2026 - Jul 2026

AI-powered Chrome Extension that guides developers through Google Cloud deployments by highlighting the exact Console button to click. **1st place**, Gamuda AI Academy Capstone Demo Day. Top committer on the team (**183 of 438 commits**). Source: github.com/yapsancode/baymax.

- Made browser automation on a live cloud console less brittle: steps are intent-based instructions (role, name, text), not hard-coded CSS selectors, so the overlay finds the best matching element across iframes at runtime.
- Architected a FastAPI, LangChain and Gemini backend that serves curated deployment guides and streams responses over SSE, deployed in Docker on Google Cloud Run with Supabase and JWKS JWT authentication.

Esportorium - Esports Tournament Platform | Next.js 16, FastAPI, PostgreSQL Mar 2025 - Jul 2026

Site where players in Malaysia found Mobile Legends tournaments. Now discontinued.

- Enforced organiser data isolation in one service layer, proven by a pytest test in CI against a real PostgreSQL container.
- Built an AI step that turns messy tournament details into a draft listing, with an accuracy eval that runs in CI as a gate; added OpenTelemetry tracing and 62 pytest tests across two GitHub Actions workflows.

Education

Gamuda AI Academy | Yayasan Gamuda x Google Cloud, Kuala Lumpur May 2026 - Jul 2026

Fullstack AI Developer track. Led monorepo structure, tooling, and Git workflows for a 6-person capstone team; coached 5 teammates on PR best practices. Capstone **Baymax** won **1st place** at Capstone Demo Day (Cohort 6, KL Campus).

Bachelor of Computer Science (Software Engineering) | MSU 2021 - 2024

Management & Science University. CGPA 3.45 / 4.00. Dean's List, September 2022.
